Autopar[®]
BRAKES

**El complemento
perfecto**

El resultado de un frenado perfecto solo puede obtenerse con discos de freno diseñados específicamente para las pastillas de freno.

TECNOLOGÍA EN DISCOS

Filtro Térmico

Dirige la transferencia de calor de la cámara de ventilación del disco; mejora la disipación de calor evitando run-out (vibración).

Metalurgia Alta Tecnología

Proceso de fundición especial que proporciona materiales completamente homogéneos.

Superficie de Fricción

Fabricado con estándares de EO. Tolerancias y maquinados de alta precisión. Superficie con revestimiento anticorrosión.

Ventilas de enfriamiento

Optimiza la disipación de calor a través de diferentes tipos de alabes de a cuerdo a la aplicación.

Specific

Confort y Máxima seguridad de frenado

Pastillas de freno Cerámicas Premium fabricadas con **Tecnología PM (Positive Molding)** y una mezcla única de **Cerámica Low-Met Patentada**, diseñada para minimizar la vibración y el ruido no deseado, ayudando al mismo tiempo a extender la vida del rotor. **Specific** proporciona potencia de frenado consistente y confortable en una amplia gama de condiciones de manejo, incluyendo paradas de pánico. Es la mejor opción para todos los autos modernos que requieren pastillas de freno con características de Equipo Original.

Backing-adhesivo fenólico
Aseguran un anclaje perfecto en toda la vida útil de la pastilla de freno.

Ranuras y chaflanes
Minimizan esfuerzos mecánicos, vibración y ruido.

Ceramic Low-Met
Fórmulas cerámicas específicas para cada auto

Sensor de desgaste
Incluye sensores acústicos y/o eléctricos de acuerdo a especificación de E.O.

Respaldo metálico
Zapatas de acero, 100% rasuradas y planchadas para un ensamble perfecto.

Laina anti-ruido
Utilizamos la más avanzada tecnología de laines anti-ruido para asegurar un frenado silencioso y confortable a nuestros usuarios.

Tecnología PM (Positive Molding)

- Otorga consistencia y fricción constante.
- Asegura el mejor desempeño de frenado.
- Proporciona mayor vida útil.
- Aumenta la resistencia al desvanecimiento por calor.

La Tecnología **PM - Positive Molding** (Moldeo Positivo) es un factor importante en la manufactura de los productos **Fritec**, utilizando el mismo proceso de fabricantes de E.O. El moldeo a presión positiva se traduce en una densidad más uniforme en las pastillas de freno aumentando la eficiencia de frenado y la vida útil del producto.

FRITEC®

FRICCIÓN TECHNOLOGY

Ceramic HD

Máximo rendimiento y poder de frenado

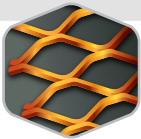

Pastillas de freno Cerámicas manufacturadas con **Tecnología PM (Positive Molding)** y una mezcla única de **Cerámica Alto Carbón Patentada**, que ofrece máxima fricción y compatibilidad con el rotor, asegurando el funcionamiento y máximo rendimiento en los diferentes vehículos para los que ha sido diseñada, eliminando prácticamente rechinidos y vibraciones. **Ceramic HD** es ideal para unidades que necesitan una fuerza de frenado adicional para los altos retos de trabajo a los que son sometidas. Autos, camionetas y camiones de uso extremo, como vehículos de flotillas, emergencia (patrullas y ambulancias) y blindados.

Backing-adhesivo fenólico
Aseguran un anclaje perfecto en toda la vida útil de la pastilla de freno.

Ceramic High-carbon
Fórmulas cerámicas alto carbón específicas para uso rudo.

Malla electrosoldada
Aseguran un anclaje perfecto en toda la vida de la pastilla de freno.

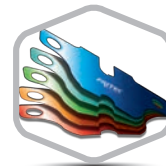

Respaldo metálico
Zapatillas de acero, 100% rasuradas y planchadas para un ensamble perfecto.

Sensor de desgaste
Incluye sensores acústicos y/o eléctricos de acuerdo a especificación de E.O.

Ranuras y chaffanes
Minimizan esfuerzos mecánicos, vibración y ruido.

Laina anti-ruido

FRITEC®

FRICCIÓN TECHNOLOGY

Specific

Confort y Máxima seguridad de frenado

ONE WAY ▲

Es la línea que ofrece materiales libres de asbesto con calidad EO. Ideal para usuarios que exigen un frenado silencioso, cómodo y seguro.

Característica

- Fórmulas libres de asbesto.
- Zapatas nuevas con pernos, levas y chavetas incluidos de acuerdo a Equipo Original (EO).
- Disponible en Vulcanizado y/o Remachado.
- La mayor cobertura del parque vehicular nacional.
- También disponible en sobremedida: One Way con X.

Beneficio

- Balance de frenado óptimo entre el eje delantero y trasero.
- Garantizan el perfecto ensamble y óptimo funcionamiento.
- De acuerdo a especificaciones de Equipo Original (EO).
- Vehículos nacionales e importados: Americanos, Asiáticos y Europeos.
- Especial para tambores rectificadas por primera vez.

FRENO ELECTRÓNICO DE ESTACIONAMIENTO
ELECTRONIC PARKING BRAKE
EPB

**FUNCIONAMIENTO, PROCEDIMIENTO PARA EL REMPLAZO
DE LAS PASTILLAS DE FRENO Y MANTENIMIENTO DEL CALIPER EPB**

FRENO ELECTRÓNICO DE ESTACIONAMIENTO
ELECTRONIC PARKING BRAKE
EPB

**FUNCIONAMIENTO, PROCEDIMIENTO PARA EL REMPLAZO
DE LAS PASTILLAS DE FRENO Y MANTENIMIENTO DEL CALIPER EPB**

EPB ELECTRONIC PARKING BRAKE

Freno Electrónico de Estacionamiento

Los avances en el área automotriz son cada día mayores, los sistemas se mejoran para un mayor rendimiento, confort y automatización. El freno de mano y/o pedal de freno que por muchas décadas ha sido completamente mecánico, no se escapa a estos avances tecnológicos, la gestión electrónica ha desplazado las palancas y pedales convencionales por un sencillo interruptor.

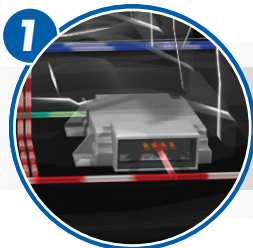

Interruptor EPB

Interruptor EPB

COMPONENTES EPB

1 **Unidad de control**
encargada de gestionar la activación de los actuadores, para aplicar o liberar el freno de estacionamiento.

2 **Interruptor de parking**
bloquea y desbloquea a voluntad el freno, ubicado en el tablero principal o consola central.

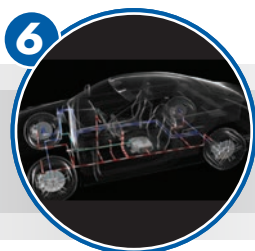

3 **Interruptor AutoHold:**
activa las asistencias de seguridad.

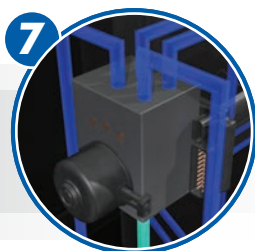

4 **Captador de posición de pedal de embrague:**
informa el punto de salida del pedal del embrague, (no aplica en caja automática).

5 **Testigo visual y acústico:**
informa su activación y/o fallo, del sistema.

6 **Red multiplexada del vehículo:**
transmite los datos necesarios para el funcionamiento.

7 **Frenos ABS:**
sistema principal para el funcionamiento del EPB.

VENTAJAS DEL FRENO DE ESTACIONAMIENTO (EPB)

AutoHold - Sistema de seguridad que gestiona las siguientes asistencias:

1

Hill start assist-

Inmoviliza el vehículo en una pendiente para evitar el retroceso involuntario del vehículo y se desactiva en el momento en que el conductor pisa el acelerador.

2

Activación automática al apagar el motor avisando por medio de una luz testigo en el tablero de instrumentos.

3

Al abrir una puerta o al desabrocharse el cinturón con el motor en marcha, este se activa como medida de seguridad.

4

En caso de requerirse, funcionara con el vehículo en marcha como freno de emergencia, haciendo una regulación de la frenada con la asistencia del ABS evitando el bloqueo de las ruedas.

4

El ABS podrá gestionar los calipers de EPB mejorando así la eficacia y seguridad durante una frenada de pánico/o emergencia.

Hill Start Assist

Activación automática

Gestión de calipers de EPB

Nota: Para llevar a cabo el reemplazo de las pastillas de freno con sistema EPB, es necesario la utilización de una herramienta de diagnóstico y seguir las recomendaciones a continuación descritas.

Scanner EPB

Herramientas de diagnóstico automatiz

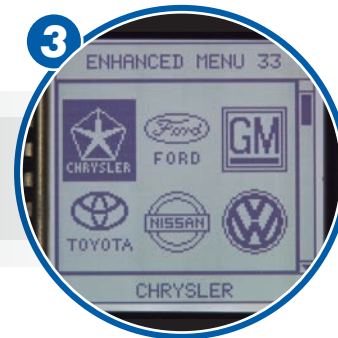

RECAMBIO DE LAS PASTILLAS DE FRENO UTILIZANDO UNA HERRAMIENTA DE DIAGNÓSTICO

Asegúrese de liberar el freno de estacionamiento y mantener desactivado el **AutoHold**.

Con el switch en **posición OFF**, conecte la herramienta de diagnóstico al OBDII del vehículo y gire el switch en posición **ON**.

Con el switch en **posición OFF**, conecte la herramienta de diagnóstico al OBDII del vehículo y gire el switch en posición **ON**.

Localice en el menú la opción **Parking Brake** o las siglas **EPB**, dependiendo del Scanner.

Seleccione la opción de **retracción** o **retroceso de calipers**.

Una vez retraídos los pistones de caliper en su funcionamiento electromecánico, aparecerá el **testigo de Parking** en el panel de instrumentos, coloque el switch en **posición OFF**.

RECAMBIO DE LAS PASTILLAS DE FRENO UTILIZANDO UNA HERRAMIENTA DE DIAGNÓSTICO

Desconecte la herramienta de diagnóstico y proceda con el desmontaje de los calipers.

Lave y lubrique todos los componentes de caliper, verifique el buen estado de los herrajes y pernos, asegúrese que los discos se encuentren dentro de especificación.

Realice el retorno del pistón de freno del disco, utilizando un oprobresor para pistones huecos. Consulte el boletín técnico "Recomendaciones para una adecuada instalación de pastillas de freno de disco", instale un juego de pastillas de freno nuevas y ensamble la pinza de caliper.

Advertencia: Nunca utilice el oprobresor para pistones sólidos traseros.
Precaución: Una vez concluido el mantenimiento, no olvide bombear el pedal de freno para cargar nuevamente los calipers de líquido, el pedal de freno debe estar alto y duro.

Conecte nuevamente la herramienta de diagnóstico, coloque el switch en posición ON e ingrese a cierre de caliper/ajuste o calibración de caliper.

Para asegurar que todo se encuentra bien, por último ingresaremos a la opción leer códigos de falla.

Finalmente coloque el switch en posición OFF y desconecte la herramienta de diagnóstico.

Nota: Las imágenes son referenciales y podrían variar dependiendo del equipo de diagnóstico a utilizar.

TIPS PARA EL REEMPLAZO DE LAS PASTILLAS DE FRENO SINO CUENTA CON UNA HERRAMIENTA DE DIAGNÓSTICO

Para retroceder el pistón de freno, realice los siguientes pasos:

Asegúrese de liberar el freno de estacionamiento.

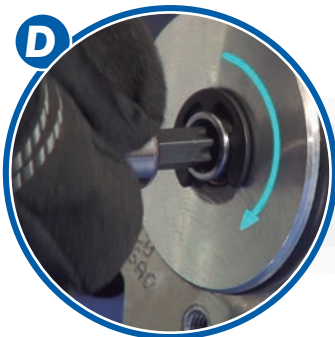

Realice el **desmontaje de la pinza de freno** y retire las pastillas de freno usadas.

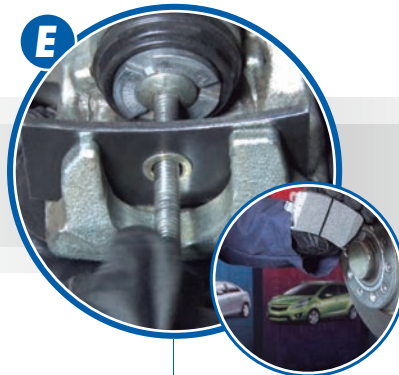

Retire los 2 tornillos tipo Torx T-30, para desacoplar el actuador del EPB de la mordaza.

Nota: Cuidé de no dañar el sello tipo O ring, de lo contrario se presentaran problemas de contaminación y desgaste prematuro en los componentes internos (rodamientos y motor eléctrico).

Gire en sentido de las manecillas del reloj el eje de articulación para retroceder hasta su punto muerto inferior la tuerca mariposa, utilice una punta Torx T-40.

Realice el retroceso del pistón de freno, consulte el boletín técnico **"Recomendaciones para una adecuada instalación de pastillas de freno de disco"**, utilice un opresor para pistones huecos, instale un juego de pastillas de freno nuevas y ensamble la pinza de caliper.

Advertencia: Nunca utilice el opresor para pistones sólidos traseros.

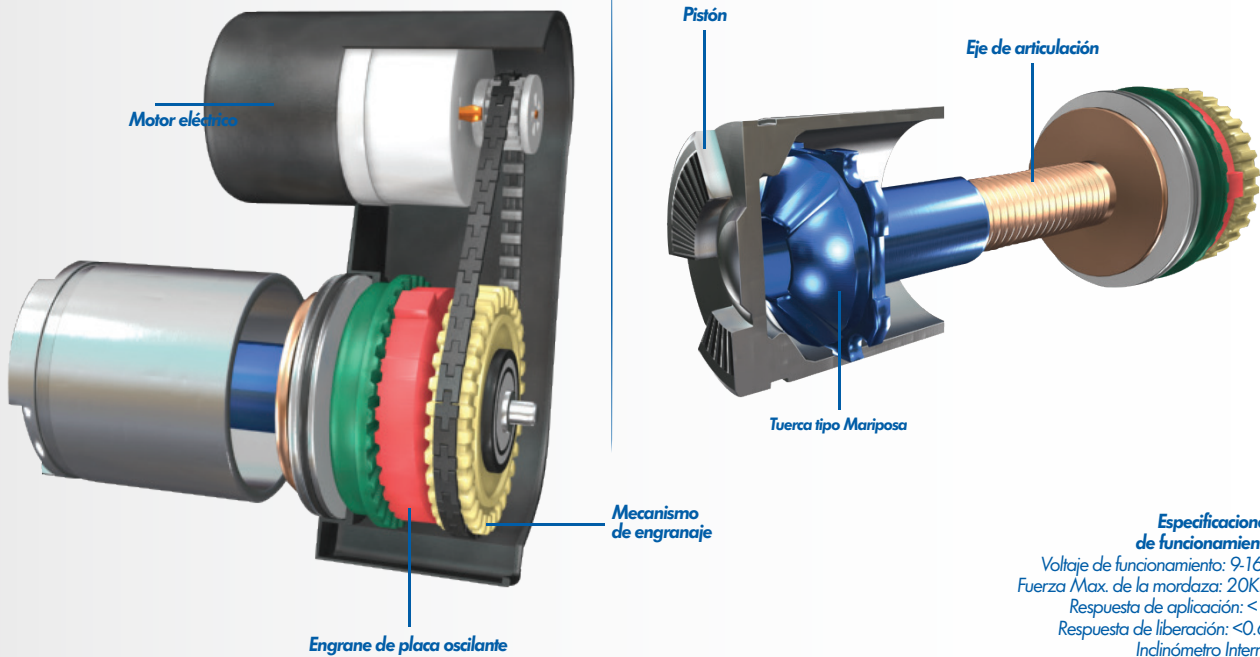

Active y desactive 3 veces el interruptor del EPB, para activar la función de Auto calibración (holgura de trabajo entre la pastillas de freno y el disco).

Precaución: Una vez concluido el mantenimiento, no olvide bombear el pedal de freno para cargar nuevamente los calipers de líquido, el pedal de freno debe estar alto y duro.

MANTENIMIENTO DEL FRENO ELECTRÓNICO DE ESTACIONAMIENTO EPB

Componentes internos del actuador del EPB

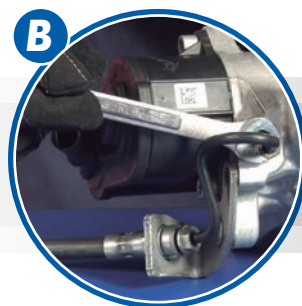

Especificaciones de funcionamiento
 Voltaje de funcionamiento: 9-16V
 Fuerza Max. de la mordaza: 20KN
 Respuesta de aplicación: <1s
 Respuesta de liberación: <0.6s
 Inclinómetro Interno

EN CASO DE REQUERIR EL REPLAZO DEL REPUESTO DE CALIPER, LE RECOMENDAMOS SEGUIR LOS SIGUIENTES PASOS

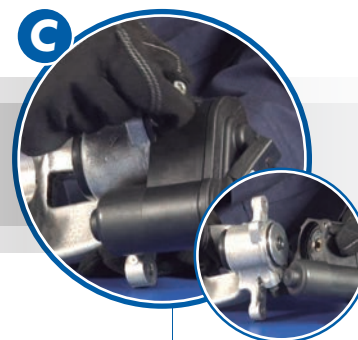

Desensamble de los componentes:

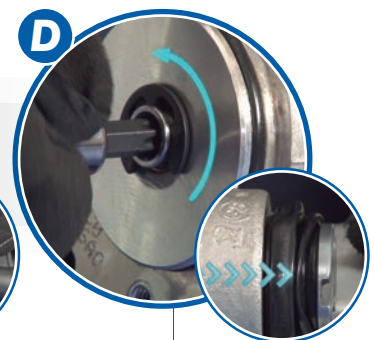

A Desconecte el amés del actuador del EPB.

B Retire la conexión hidráulica (coloque ahorradores en las mangueras) y la mordaza del caliper.

C Una vez desmontado el conjunto electromecánico, retire los 2 tornillos tipo Torx T-30, que sujetan el actuador del EPB a la pinza de caliper.

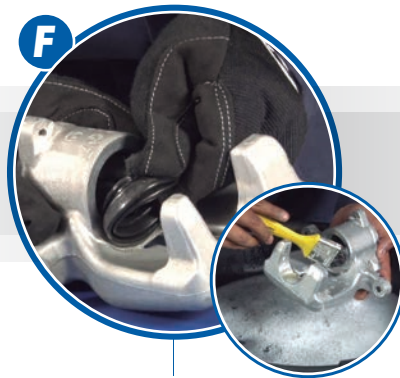

D Utilice una punta Torx T-40 para extraer el pistón y la tuerca mariposa del caliper, gire en sentido contrario a las manecillas del reloj el eje de articulación.

DESENSAMBLE E INSPECCIÓN DE LOS COMPONENTES INTERNOS DEL CALIPER EPB

Para retroceder el pistón de freno, realice los siguientes pasos:

E Inspeccione visualmente la tuerca mariposa para descartar algún daño, revise cuerda y zona de contacto.

F Retire el cubre polvo y la liga, lave la mordaza y el alojamiento del pistón, utilice preferentemente un desengrasante biodegradable, utilice una lija fina de agua en caso de existir corrosión.

G Precaución: Evite mojar la zona de acoplamiento con el módulo de accionamiento, de lo contrario los rodamientos internos sufrirán daños.

ENSAMBLE DE LOS COMPONENTES INTERNOS DEL CALIPER EPB

A Instale la liga de caliper, prelubricada con grasa base silicón.

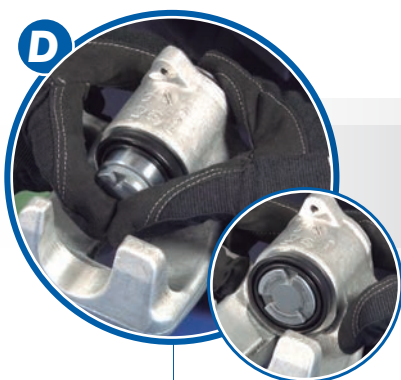

B Lubrique la cuerda de la tuerca mariposa e introdúzcala en el eje de articulación, girándola en sentido horario en su totalidad.

C Instale el cubrepolvo, cuidando la posición y verificando el correcto acoplamiento en el alojamiento del caliper.

ENSAMBLE DE LOS COMPONENTES INTERNOS DEL CALIPER EPB

D Introduzca el pistón considerando sus guías con las de la tuerca mariposa.

E Ensamble el módulo de accionamiento en la mordaza de caliper, aplicando un torque de 12 Nm (9 lb/ft) en los 2 tornillos de sujeción T-30.

F Conecte la línea hidráulica, ensamble la mordaza en el porta caliper y conecte el armés del módulo de accionamiento del EPB.

G Realice un procedimiento de purga, consulte el boletín técnico "Purgado del sistema", para llevar a cabo este procedimiento.

H Conecte la herramienta de diagnóstico, coloque el switch en posición ON e ingrese a cierre de caliper/ajuste o calibración de caliper.

C Verifique que no existan códigos de falla, ingrese a la opción leer códigos de falla.

D Finalmente coloque el switch en posición OFF y desconecte la herramienta de diagnóstico.

Nota: Si no cuenta con una herramienta de diagnóstico, active y desactive 3 veces el interruptor del EPB, para activar la función de Auto calibración del EPB (holgura de trabajo entre las pastillas de freno y el disco).

PARA FINALIZAR, LE RECOMENDAMOS LLEVAR A CABO UN RECORRIDO DE PRUEBA, PARA ASEGURAR QUE EL MANTENIMIENTO REALIZADO FUE EL ADECUADO Y EL SISTEMA TRABAJA CORRECTAMENTE

Para mas información consulte el video:

"FUNCIONAMIENTO Y MANTENIMIENTO DEL FRENO ELECTRÓNICO DE ESTACIONAMIENTO EPB"

Dirección electrónica
www.tusfrenos.com

RECOMENDACIONES

Diagnóstico

Antes de proceder con el desarmado y/o reemplazo de algún componente, es importante verificar la condición general en que se encuentra el vehículo, le recomendamos manejar el vehículo y/o indagar más a fondo sobre la problemática reportada por el usuario.

Maneje el vehículo para verificar condición

Indague más a fondo sobre la problemática reportada por el usuario

Seguridad

Asegúrese que las condiciones de trabajo y el equipo a utilizar cumplan con las especificaciones necesarias para llevar a cabo el mantenimiento requerido:

- 1** Estacione el vehículo en una superficie plana y de concreto.
- 2** Aplique siempre el freno de estacionamiento.
- 3** Verifique que los elementos de elevación se encuentren en buen estado y que cumplan con los rangos de tonelaje al que serán sometidos.
- 4** En caso de no utilizar rampas de elevación, siempre debe utilizar torres de apoyo, colocándolas en las costillas del chasis del vehículo para un apoyo seguro.
- 5** Dependiendo del eje a trabajar, considere el bloqueo de las ruedas del eje opuesto, para evitar deslizamientos involuntarios del vehículo, mediante el uso de elementos de bloqueo.

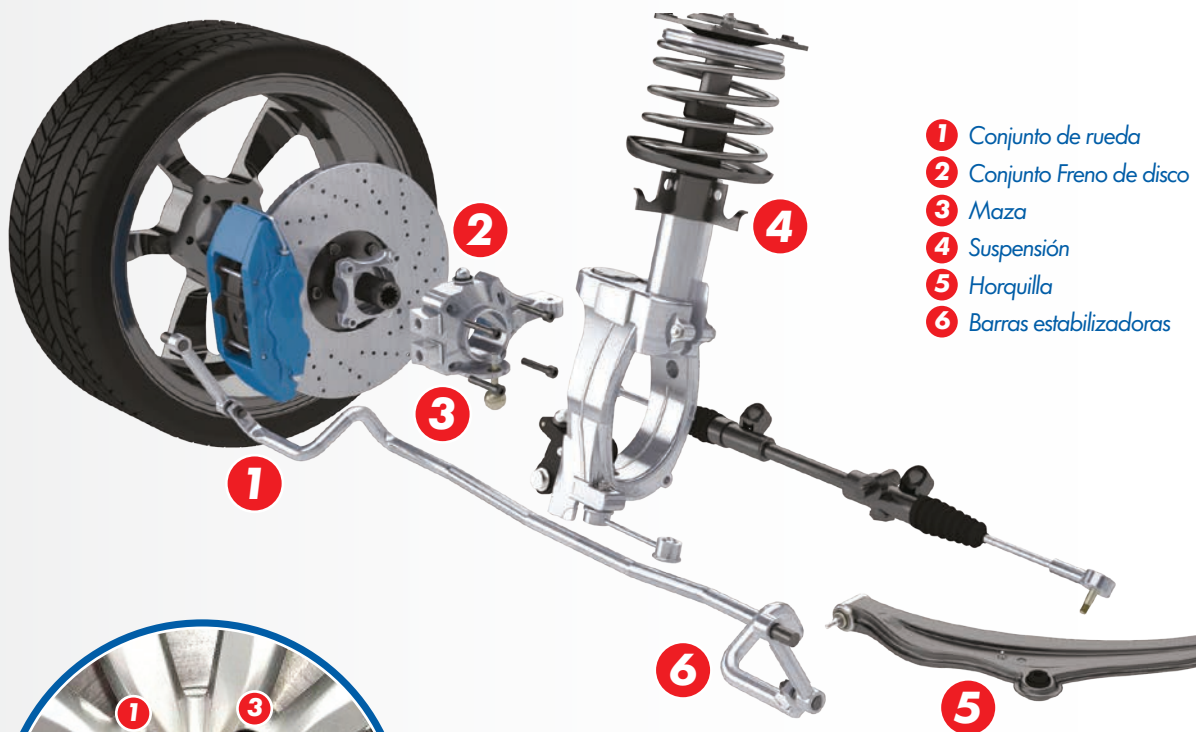

INSPECCIÓN GENERAL

Considere los siguientes puntos:

- 1 Afloje tuercas o birlos de sujeción de las ruedas, siguiendo una secuencia en forma de cruz.
- 2 Asegúrese de contar con las herramientas adecuadas para realizar el mantenimiento y/o reparación, tomando en cuenta el sistema de frenos del vehículo a trabajar.
- 3 Siempre realice una inspección general a los componentes periféricos del vehículo como son las ruedas y suspensión de ambos ejes (en caso de identificar componentes dañados o en mal estado estos deberán ser reemplazados por nuevos).

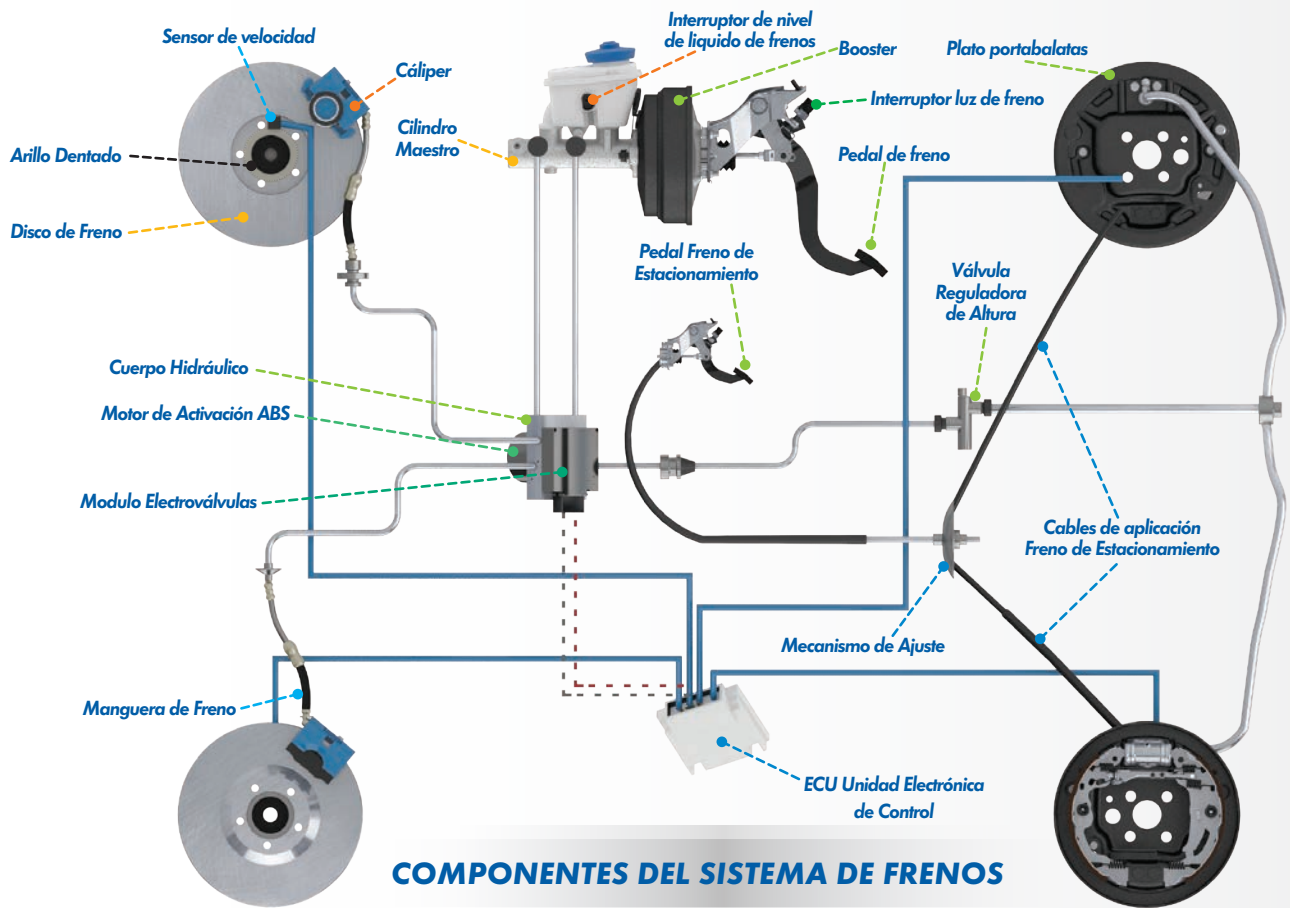

COMPONENTES PERIFERICOS

SECUENCIA DE APRIETE

Una vez realizada la inspección de los componentes periféricos, proceda con el desmontaje y la inspección de cada uno de los componentes del sistema de frenos, tomando en cuenta la secuencia que aparece arriba.

REVISIÓN E INSTALACIÓN. COMPONENTES DEL SISTEMA DE FRENOS

REVISIÓN E INSTALACIÓN. COMPONENTES DEL SISTEMA DE FRENOS

Inspección al desarmado y limpieza de los componentes de freno.

Esta acción ayudara a identificar qué tipo de mantenimiento es el que requiere el vehículo a trabajar.

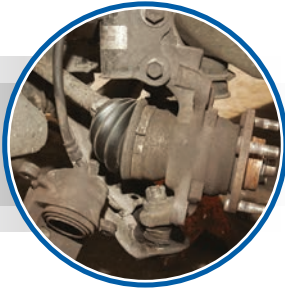

Es necesario que estos se encuentre limpios para una fácil detección de daños.

Para este fin le recomendamos utilizar agua y jabón o preferentemente un desengrasante que sea biodegradable.

Nota: Reemplace todos los componentes dañados por nuevos.

1) TUBERÍAS Y MANGUERAS

Componentes en óptimas condiciones

Estado del componente.

- Resqueidad.
- Grietas.
- Abombamientos.
- Dobleces.
- Fisuras - fugas.

Origen del daño.

- Mangueras endurecidas por antigüedad.
- Utilización de ahorcadores en mangueras dañadas.
- Colocación inadecuada del caliper.
- Dejar los calipers colgados de las mangueras.

Recomendación / Acciones a seguir.

- Reemplace los componentes dañados.
- Reemplace el líquido de frenos.

TABLA DE RECOMENDACIONES PARA CAMBIO DE LÍQUIDO DE FRENOS

Tipo de servicio	Periodo de recambio
Particular sin ABS	Cada 2 años
Intensivo sin ABS	Cada año
Particular con ABS	Cada año
Intensivo con ABS	Cada 8 meses

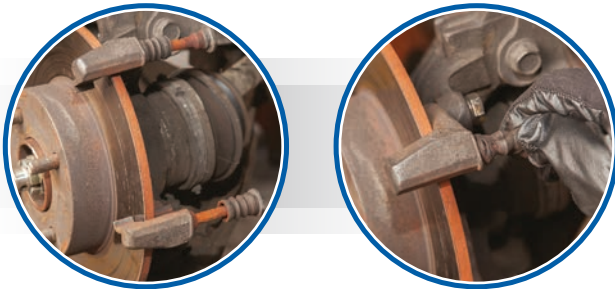

- Siempre coloque ganchos de sujeción para evitar que los calipers cuelguen de las mangueras.

2) PERNO GUÍA

Verifique que este se encuentre libre de golpes o deformaciones, de lo contrario reemplácela.

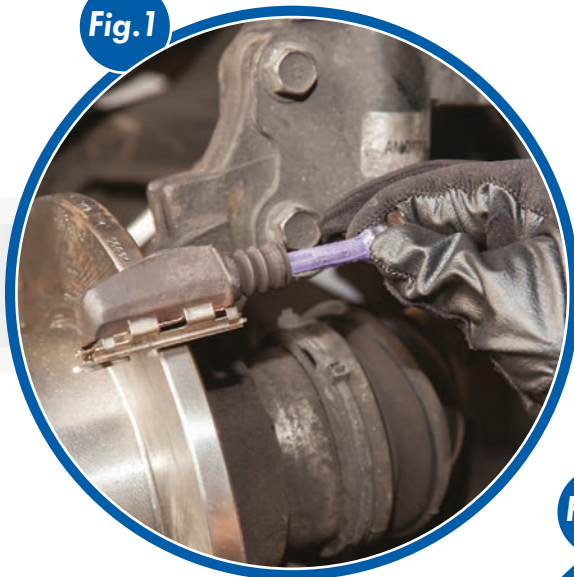

Pernos guía

Componentes dañados

Componentes en óptimas condiciones

Fig.1

Estado del componente.

- Oxidados.
- Resecos.
- Deformados.
- Con desgaste excesivo.
- Cabeza y cuerda barrida.
- Cubrepolvos hinchados y/o rotos.

Origen del daño.

- Aprietes excesivos.
- Falta de lubricación o utilización de grasa inadecuada.
- Exceso de temperatura.

Recomendación / Acciones a seguir.

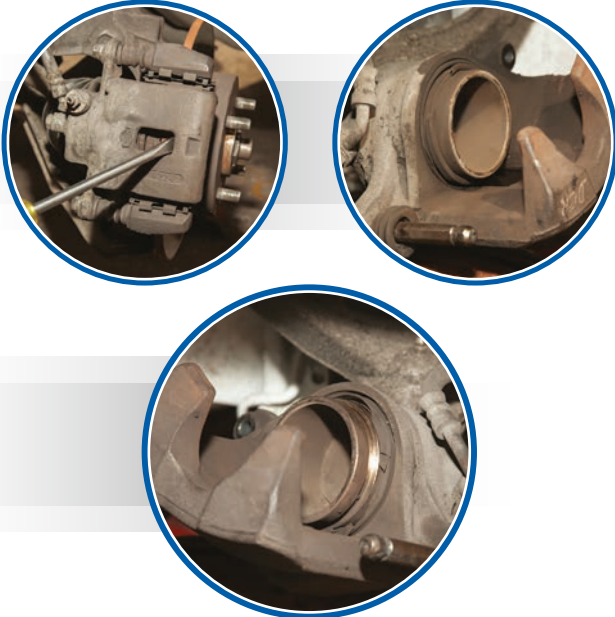

- Utilice un desengrasante biodegradable para remover impurezas.
- Lubrique con grasa base silicón recomendada para contacto hule-metal, para favorecer el libre deslizamiento y evitar dañar los hules. **Fig.1.**
- Verifique la correcta instalación de los tornillos y de los cubrepolvos en los pernos guía.
- Asegure dar el torque recomendado por el fabricante.
- Si estos presentan daños reemplácelos por unos nuevos. **Fig. 2.**

Nota: Nunca lubrique utilizando grasa para balero o grafitada, ya que por ser un derivado del petróleo, degradará e inchará los hules.

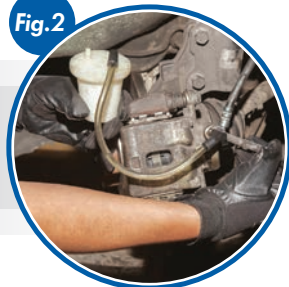

Fig.2

MORDAZA DEL CALIPER PISTÓN, CUBREPOLVOS Y LIGAS DE CALIPER

Componentes en óptimas condiciones

Estado del componente.

- Endurecimiento.
- Deformación.
- Rupturas y/o fugas de líquido de frenos.
- Pistones pegados.

Origen del daño.

- Material degradado por la acción de la temperatura y falta de recambio (mantenimiento preventivo).
- Exceso de temperatura de trabajo en el sistema.
- Retorno del pistón de caliper utilizando una herramienta inadecuada al recambio de las balatas.

Recomendación / Acciones a seguir.

Retorno del pistón.

Siempre abra el tornillo purgador para retornar el pistón y así evitar contrapresiones, daños en las ligas del caliper y cuerpo hidráulico en el caso de los vehículos equipados con ABS. ** Utilice un depósito recolector de líquido de frenos, ya que éste es altamente corrosivo y contaminante. **Fig.1.**

Pistón hueco.

Utilice un opresor de balatas y/o pinza tipo carpintero. **Fig. 2.**

Pistón sólido.

Utilice el kit de opresores para pistones sólidos traseros, considere la dirección del giro (marca y modelo de vehículo). **Fig. 3.**

- Si es necesario el recambio de alguno de éstos componentes al armado, utilice grasa base silicón recomendada para contacto hule-metal, para una fácil instalación y evitar dañar la liga de caliper. ** La instalación de estos componentes deberá ser de forma manual.

- En vehículos de uso particular, le recomendamos hacer el reemplazo de éstos componentes cada 3 juegos de balatas, y para uso intensivo cada cambio de balatas.

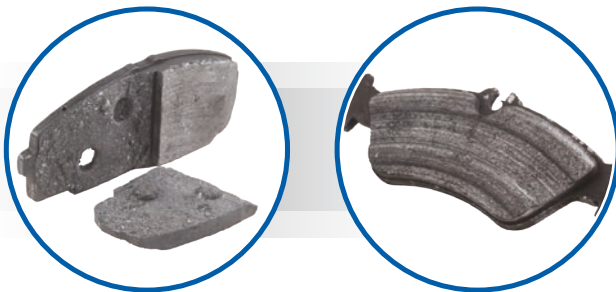

Nota: Ver tabla **FRITEC** de daños comunes a balatas y discos.

3) PORTA CALIPER

Siempre verifique el buen estado de la cuerda y cabeza de los tornillos, así como del estado de las cuerdas del porta caliper, de lo contrario reemplácelos.

Balatas (Pastillas)

Componentes dañados

Componentes en óptimas condiciones

Estado del componente.

- Cristalizadas.
- Agrietadas.
- Escalonadas.
- Acuñadas.
- Desgaste desigual.
- Zapata doblada con desprendimiento de la pastilla.

Interpretación.

- Exceso de temperatura de trabajo y/o abuso del pedal de freno.
- Pernos guías y/o pistones pegados.
- Liga endurecida y cubrepolvos de caliper dañados.
- Discos fuera de especificación, torcidos y/o con excesiva ceja.
- No se instalaron los alambres separadores.
- Aplicación incorrecta de la balata (números similares).
- Contaminación de la pastilla con grasa o algún agente externo.
- Aplicación de silicón en las zapatas y/o en los respaldos de los herrajes en la instalación.

Recomendación / Acciones a seguir.

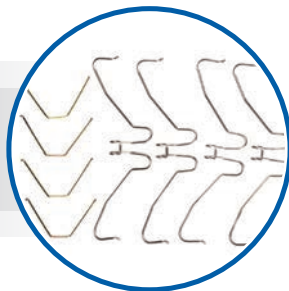

- Asegúrese de seleccionar la aplicación correcta para el vehículo.
- Una vez seleccionado el tipo de balatas a instalar, lubrique la zona de contacto de la zapata con las guías, utilizando grasa base molibdeno, recomendada para contacto metal-metal, favoreciendo el deslizamiento.
- Si la aplicación lo requiere instale el juego de alambres separadores. (Consulte guía para la correcta colocación de los alambres separadores), y/o instale los muelles exteriores de caliper.
- Verifique que la balata desplace libremente en las guías del caliper.

Nota: Evite contaminar los discos y balatas con grasas y/o lubricantes durante el armado. Consulte la guía FRITEC de daños comunes a balatas.

HERRAJES

Componentes en óptimas condiciones

Estado del componente.

- Falta del componente.
- Rotos.
- Desgastados.
- Deformados.
- Sin brío.

Origen del daño.

- Falta de recambio (mantenimiento preventivo).
- Mala instalación.
- Aplicación incorrecta.
- Herraje modificado.

Recomendación / Acciones a seguir.

Preferentemente instale un juego de herrajes nuevo y asegure que la instalación sea la correcta y que éstos queden fijos en el porta-caliper.

Lave y elimine óxido e impurezas del porta-caliper y asegure el correcto ensamble.

4) DISCOS

Estado del componente.

- Cejas.
- Fisuras.
- Rayados.
- Fracturados.
- Excesivamente delgados.
- Contacto desigual (alabeo).
- Coloración azulada y/o desgaste desigual de las pistas.

Fig.1

Fig.2

Fig.3

Origen del daño.

- Discos excesivamente desgastados por debajo del mínimo espesor.
- Exceso de temperatura de trabajo.
- Líquido de frenos degradado.
- Balatas de baja calidad.
- Falta de ajuste en eje trasero (freno de tambor) y/o balatas de baja calidad.
- Malos hábitos de manejo y sobrecarga.
- Aplicación inadecuada y/o modificaciones realizadas al vehículo.
- Pernos guía y pistones pegados por falta de recambio y/o lubricación.

Recomendación / Acciones a seguir.

- Con un Vernier para disco. **Fig.2.** Compara este valor con el especificado por el fabricante MIN THK que se localiza marcado en el material "copa o canto del disco" dependiendo del fabricante. **Fig.1.** Si la lectura obtenida es menor a la indicada, éstos deberán ser reemplazados.
- Si el disco se encuentra dentro de especificación, verifique el alabeo/ovalamiento utilizando un indicador de carátula con una base imantada, si la lectura obtenida supera las 0.005", éste deberá ser reemplazado.
- En caso de retirar los discos para ser rectificadas márkuelos con una referencia de instalación y de posición de los mismos.
- Al instalar discos nuevos, éstos deberán ser limpiados con un solvente, agua y jabón.
- Si los discos fueron rectificadas, utilice una lija grado 200 para dar un acabado fino y así eliminar los filos del corte, posteriormente lávelos con agua y jabón e instáuelos considerando la posición marcada al desmontaje.
- Retire el óxido e impurezas del barreno central de la maza y de la copa interna del disco, para garantizar un correcto asentamiento entre éstos componentes, utilice un cepillo de alambre.
- Asegure que la posición del disco sea la correcta (disco direccional), así como la aplicación a instalar.
- Coloque tornillo fijador (en caso de requerirse).

Nota: Evite contaminar los discos y balatas con grasas y/o lubricantes durante el armado. Consulte la guía FRITEC de daños comunes a balatas.

5) MAZAS DE RUEDA

Remueva óxido e impurezas de la superficie de contacto de la maza utilizando un cepillo de alambre.

Limpie la superficie de contacto utilizando un solvente.

Verifique que la superficie se encuentre libre de golpes o deformaciones y verifique, que tanto el juego axial como el radial se encuentren dentro de especificación, de lo contrario reemplace la maza de rueda.

Utilice un indicador de carátula con un bloque imantado para verificar las holguras que se tienen en la brida de la maza:

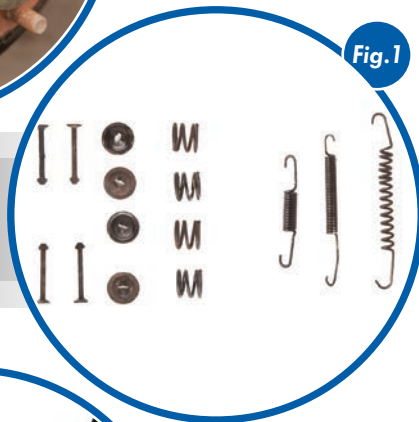

Holgura en rodamientos

El juego radial (oscilación lateral), así como el juego axial de la maza de rueda no debe exceder 0.002", de lo contrario deberá reemplazarla.

6) FRENO DE TAMBOR

Componentes dañados

Componentes en óptimas condiciones

Estado del componente.

- Tambores (rayados, azulados, ovalados, diámetro fuera de especificación).
- Cilindro de rueda con fuga de líquido de frenos.
- Purgadores dañados.
- Herrajes y ajustadores en mal estado.
- Plato porta balatas desgastado y/o torcido.

Origen del daño.

- Sobre ajuste y continuos ajustes de las balatas.
- Aplicación incorrecta (números similares).
- Incorrecta aplicación de balatas en sobremedida.
- Falta de recambio de elementos dañados (mantenimiento preventivo).

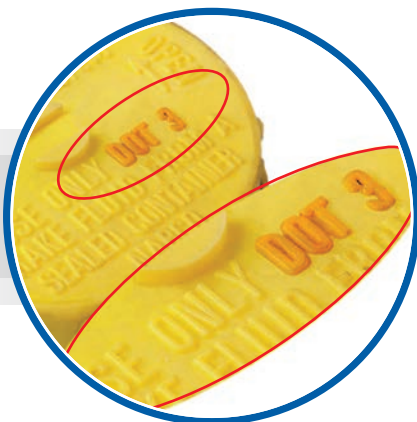

Recomendación / Acciones a seguir.

- Utilice un escantillón para asegurar el ajuste correcto de las ruedas. **Fig.2.**
- Si algún componente de la herrajería se encuentra dañado, reemplácelo. **Fig.1.**
- Si al medir los tambores se encuentran con un diámetro mayor al especificado por el fabricante, deberá reemplazarlos. **Fig.3.**

Nota: Asegúrese de dar el torque especificado por el fabricante a los birlos de sujeción, para rin de aluminio es de 90 a 100 lbs - ft, y para rin de placa-acero es de 100-115 lbs - ft.

7) CILINDRO MAESTRO

Verifique el estado de líquido de frenos preferentemente utilizando una herramienta de diagnóstico, en caso de presentarse fugas de líquido de frenos en el repuesto del cilindro o en las conexiones, asegure primeramente el correcto apriete de las mismas, de continuar presentando la falla, el componente deberá ser reemplazado por uno nuevo.

Estado del componente.

- Fugas.
- Líquido de frenos sucio, degradado y/o contaminado.
- Depósito sin tapa.

Origen del daño.

- Gomas del cilindro dañadas.
- Falta de recambio periódico del líquido de frenos.
- Cuerdas de las conexiones dañadas.

Recomendación / Acciones a seguir.

- Verifique el nivel del líquido de frenos.
- Utilice el tipo de líquido de frenos recomendado por el fabricante indicado en la tapa o depósito "DOT 3 o DOT 4".
- Recambie el líquido de frenos periódicamente, considerando el uso y si el vehículo está equipado con ABS.

TABLA DE RECOMENDACIONES PARA CAMBIO DE LÍQUIDO DE FRENOS

Tipo de servicio	Periodo de recambio
Particular sin ABS	Cada 2 años
Intensivo sin ABS	Cada año
Particular con ABS	Cada año
Intensivo con ABS	Cada 8 meses

- Preferentemente utilice un tanque de purga (boya) convencional o eléctrica a presión, o una bomba eléctrica de vacío para asegurar un recambio total del líquido de frenos y una limpieza del sistema.
- Colocar correctamente la tapa del depósito.

Nota: Ver recomendación para un adecuado procedimiento de purga y periodos de recambio de líquido de frenos. Por último y para asegurar que todos los componentes se encuentran adecuadamente instalados y asegurar el correcto funcionamiento del sistema de frenos, realice el manejo del vehículo.
